AY 2026-2027

S.C.O.P.E.S – Team Scope Sheet

Scoping of design challenge When you want to work on real project using Design Thinking, begin the process with a specific and purposeful situation or problem to solve called Design Challenge. The Design Challenge should be doable, clear, actionable and hopefully inspiring. Your problem statement should be an outcome and not a solution.
You can use SCOPES as a tool to brainstorm and frame your problem.

TEAM NAME	**PixelMinds**
TEAM MEMBERS	**Gokul Krishna I S (241701016)** **Sriyaanchita S (241701057)**
DOMAIN NAME	**Postpartum Wellness App**
DATE	**07/08/2026**
FACULTY INCHARGE	**Dr P.Revathy**

S – Situation / Problem • What is the real situation you want to address? • Where does this problem occur? • Describe without mentioning any solution.	• New mothers often experience stress, anxiety, and emotional exhaustion while caring for a newborn. They tend to prioritize their baby's needs over their own mental well-being, leading to unnoticed emotional struggles. • This problem mainly occurs at home during the postpartum period, where mothers adjust to new responsibilities. It also affects partners and family members who may be unsure how to provide effective support.

	• Many mothers feel isolated, overwhelmed, and sleep-deprived after childbirth. A lack of awareness and timely emotional support can negatively impact both the mother's and the baby's overall well-being.
C – Constraints What are the CONSTRAINTS when trying to address the situation or problem?	• **Privacy and Security:** The app stores sensitive personal and mental health data, so it must be kept secure. • **Not a Medical Tool:** The app supports mothers but cannot replace doctors or mental health professionals. • **Regular Usage:** New mothers may not use the app regularly because they are busy and tired. • **Family Support:** Some features work better when partners and family members actively participate. • **Different Needs:** Every mother's postpartum journey is different, so the same suggestions may not work for everyone.
O – Objectives & Outcomes What are the OBJECTIVES and intended OUTCOME of this design challenge?	**OBJECTIVES** • Support new mothers during the postpartum period. • Promote mental health and emotional well-being. • Encourage active involvement from partners and family. • Simplify baby care management. • Provide personalized wellness guidance. • Protect the mother's privacy and personal information. **INTENDED OUTCOMES** • Reduce stress and improve mothers' emotional well-being. • Increase partner and family participation in baby care. • Improve coordination in newborn care. • Help mothers identify early signs of emotional distress. • Encourage timely professional support when needed. • Create a supportive and positive postpartum experience.
P – People Who are the PEOPLE that you are trying to help? Whose problem are you trying to address?	**PRIMARY STAKEHOLDERS** • New Mothers • Babies • Partners

Primary Stakeholders Secondary Stakeholders Decision Makers	**SECONDARY STAKEHOLDERS** • Family Members • Caregivers • Mothers' Community **DECISION MAKERS** • Mother (Primary Decision Maker)
E – Estimates What are the ESTIMATED resources required for this design challenge?	**HUMAN RESOURCES** • New mothers for interviews and user testing • Partners and family members for feedback • Healthcare awareness resources (for validating general postpartum information) **RESEARCH RESOURCES** • Interviews with new mothers • Surveys and questionnaires on postpartum challenges • Observation of daily caregiving routines • Study of existing postpartum wellness and baby-care apps • User feedback and prototype usability testing **TECHNICAL RESOURCES** • UI/UX prototyping tools (Figma) • Mobile app development framework (Flutter or React Native) • Firebase (Authentication, Database, Notifications) • AI API for the wellness assistant • Development environment (Android Studio / VS Code)

	• Version control (Git & GitHub)
S – Scope to Explore Is there ample SCOPE to explore multiple alternatives to address the problem?	There is good scope to explore different solutions for postpartum care, including mental wellness, baby care, and family support. • AI-based wellness guidance • Stress tracking through mood check-ins or journals • Partner and family collaboration features • Personalized recommendations for mothers • Mothers' community and peer support • Gamification to encourage regular app usage • Easy-to-use dashboards for different users • Future integration with healthcare services and wearable devices
Frame the Design Challenge	How might we create a family-centered postpartum wellness platform that helps new mothers manage stress, simplify baby care, and encourage support from partners and family while protecting their privacy and personal information?
